Shipping Weight:	42 lbs.

(specifications may be changed without notice)

The competitively priced manual slicers have a feature rarely found on lower cost machines-durable stainless finish anodized aluminum. Their clean line design eliminates all crevices and corners so thorough cleaning is easy. Only the knife guard and meat carriage are removable and they disassemble and reassemble without tools of any kind.

An integral sharpener is permanently mounted ready for use. Precision machined components are enclosed within a heavy one piece casting.

Safety interlock prevents operation when blade cover is removed. MS Models
